

Pregnancy and baby loss: providing support in community settings

Support and compassionate care training for GPs and surgery staff

7 hours / 3.5 hours - delivery via face-to-face workshops or online
Up to 2 hours – online delivery

Overview

This training is facilitated by a specialist bereavement care trainer and is ideal for GPs and staff teams within GP surgeries. It is an excellent opportunity for the whole team to increase their confidence, further their knowledge and provide compassionate care and support for those who have experienced pregnancy or baby loss. This is skills-based training with a variety of opportunities to learn through case studies and skills practice, and explore support throughout the grief journey.

The list of outcomes for participants below is based on a full-day workshop and will be modified to fit the length of the session you require and the method of delivery.

Participants will:

- Learn about the different experiences of pregnancy, birth and the death of a baby
- Explore the impact of pregnancy and baby loss on partners and children
- Discover how culture, community and identity influences the experience of loss and the grief journey
- Develop an understanding of the impact of grief, bereavement and trauma on the whole family, and the impact on their mental health
- Consider the skills required to communicate empathically, building confidence in using the right words
- Explore the impact of previous loss for people going through subsequent pregnancies
- Reflect on your own boundaries and the impact of working with baby loss on your wellbeing

The voices of those who have experienced loss and the needs of the people supporting them are at the centre of the learning materials, which include a parent speaker (full day only), video content and links to useful tools and resources.

Following the session, participants will receive a copy of the materials used, links to support resources and further information, as well as a certificate of attendance.
